Our mettle is made of **MAGNUS STEEL**

DESCRIPTION

Magnus Steel (PTY) Ltd Mine Support Screening JT4Q range is a registered design Weld Mesh. It is pre-patterned with 500mm drilling lines in order to help the operators underground to keep the support rule.

Our Mine Support Screening meets the minimal technical standards complying with the mine's requirements.

The JT4Q range is manufactured to SABS1408/1987 and ISO9002 standards, and welds to SABS044: PART111 U.OS which is tested and certified by an accredited laboratory.

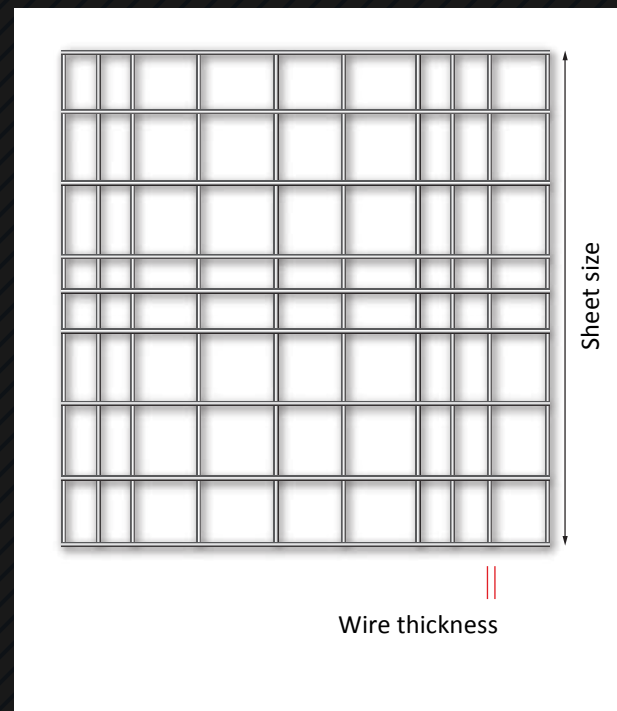

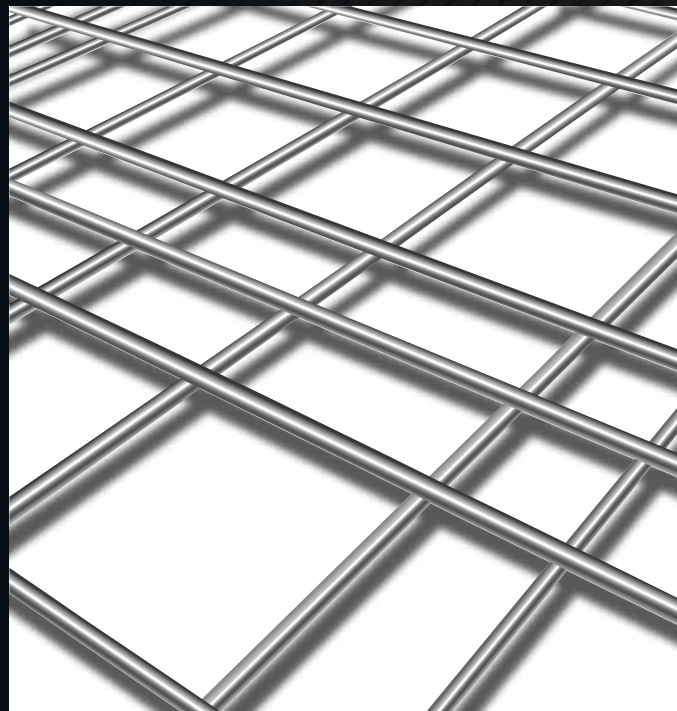

Our sheets can be supplied in **Mild Steel** or **Galvanised**.

This mesh has been extensively tested at Sasol and found to be superior to other mesh used.

AVAILABLE SIZES

TYPE NUMBER	SHEET SIZE (mm)	WIRE THICKNESS
JT4Q-A	6000 X 1700	5.6MM
JT4Q-B	3000 X 1700	5.6MM
JT4Q-C	6000 X 1700	4.0MM
JT4Q-D	3000 X 1700	4.0MM

MAGNUS MINE SUPPORT SCREENING

ADVANTAGES

- ▲ Easier installation
- ▲ Safer with easier handling
- ▲ Active support compared to netting which is a passive support
- ▲ Use less washers per sheet
- ▲ Minimal time delay for installation
- ▲ Flush-cut edges

EEZEE WASHER

The **EEZEE WASHER** is a double nutting method used to support back areas without the need for heavy machinery. To make the system even more effective a connection system has been designed to connect our Mine Support Screening where the sheets overlap for further improved strength and total coverage with minimal use of washers per sheet.
